### **Aerial Map**

#### **Land Description**

The land is level to gently sloping, with water drainage to Plum Creek, which runs through the timber part of the East side of the farm.

#### **Buildings/Improvements**

None

#### **Drainage**

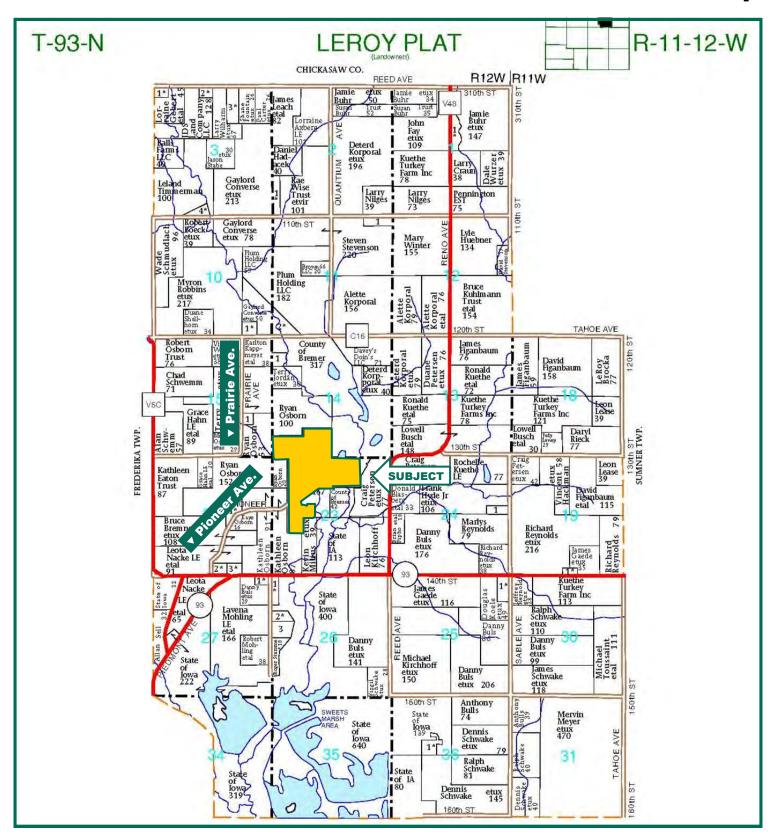

Surface drainage takes place with most water running in an East/Southeasterly direction. A portion of the farm has drainage tile, most of this being installed in the 1960's. Two larger waterway ditches take water from the West / Northwest side of the farm and deposit this in the Plum Creek to the East.

#### **Water & Well Information**

None

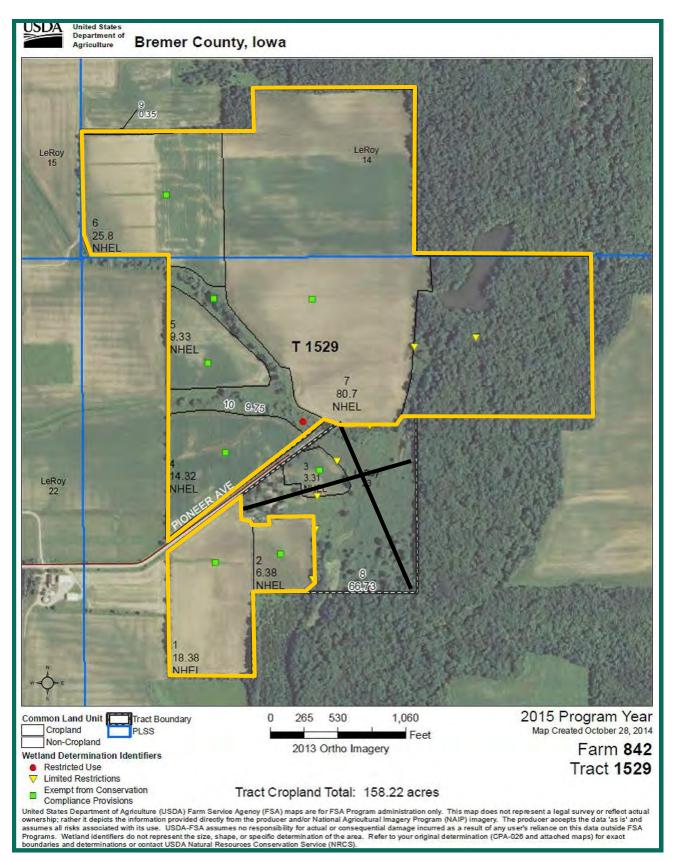

The information gathered for this brochure is from sources deemed reliable, but cannot be guaranteed by Hertz Real Estate Services, Inc. or its staff. All acres are considered more or less, unless otherwise stated.

**CSR/CSR2 UPDATE:** In January, 2014, the USDA Natural Resources Conservation Service (NRCS) released a soil survey update containing a Corn Suitability Rating (CSR) for Iowa soils based on a revised formula referred to as CSR2. For any given farm, the CSR values based on the CSR2 formula may be significantly different than the original CSR values published prior to January, 2014. Additionally, the current soil survey may contain soil types that are not found in pre-January, 2014 surveys, which will result in the CSR being reported as a null value. As the market transitions to the new CSR2 formula, we are providing both CSR and CSR2 values where both values are available. If a soil type does not have a CSR value, and is being reported as a null value, we are providing the weighted CSR based on the pre-January, 2014 soil survey data.
