CSR/CSR2 UPDATE: The State of Iowa has historically used Corn Suitability Rating (CSR) as its soil productivity index. To better recognize soil type variability, the USDA Natural Resources Conservation Services (NRCS) is in the process of reclassifying soil map units in various Iowa counties. In recognition of this change and in an effort to make the CSR more consistent across the state, Iowa State University has developed a new formula called **CSR2**, which does not directly correlate to the previous CSR values, but *replaces* them. There may be a significant difference between the old CSR value and the new CSR2 value on any given farm. We are providing both CSR and CSR2 soil maps during this transition period to illustrate any changes. For additional information regarding CSR2, please see the link on our website at www.Hertz.ag.
