SECTIONAL VIEW

Limitations of soil that affect use for on-site subsurface sewage disposal.

- 1. Slow percolation rate. (Greater than 30 min./in.)
- 2. High seasonal water table.
- 3. Slope limitations. (Exceeds 10%)
- 4. Wet depressions or poor surface drainage.
- 5. Impervious layer within 48" of surface.
- 6. Overflow of run off water from adjacent higher areas.
- 7. Insufficient isolation distance from _____

servations, recommendations: Parcels H, D, F, I are approved as indicated. Water
 tables on these lots are at 4.0' and below. Lots J, K, & G are approved as
 indicated, however due to the high seasonal or high water table, mound systems
 be designed for this development when permits are issued. It is very
 want that the sewage systems be placed in the areas designated as approved.
