

**Sartain-Williams Timberlands
Tract 85565 - East**

**30°47'8.7"N
93°40'14.0"W**

This tract was originally 436 acres but the western 82 acres were sold prior to completion of the inventory leaving 354 acres located east Caney Creek. The residual acreage includes young pine plantations and approximately 62 acres of SMZs (Streamside Management Zones) that comprise the merchantable timber.

The 62 acres contain a total of 3,744 tons of mixed natural and planted pine and hardwood with an estimated value of \$46,476. The pine component accounts for 29% of the total volume and 54% of the value. Most of the timber is accessible for harvest without too much difficulty. However, few of the acres are convertible and most should not be harvested aggressively (exceptions include the perimeter of some of the areas). Conservative selective harvests are recommended to maintain the integrity of the SMZs. It is likely that roughly ½ of the timber value is available for extraction during any single harvest interval (7-10 years).

The timber inventory data were collected from 19 sample points distributed across the 62 acres. (Note: timber inventory data were collected for the 82 acres that were part of the original tract. Timber inventory information is presented in this report under a separate heading.)

The GPS coordinates reference the point of access on the county road from the south.

85565— Merchantable Timber (62 acres)

<i>PRODUCT</i>	<i>TONS</i>	<i>DOLLARS</i>	<i>\$/TON</i>
pine pulpwood	219	\$1,533	\$7.00
pine topwood	177	\$1,241	\$7.00
pine chip-n-saw	189	\$3,210	\$17.00
pine small sawlogs (11.5" to 13.5" dbh)	138	\$3,875	\$28.00
pine sawlogs (>13.5" dbh)	379	\$15,164	\$40.00
Total Pine	1,102	\$25,023	\$22.71
hardwood pulpwood	1,423	\$5,692	\$4.00
hardwood topwood	493	\$1,972	\$4.00
hardwood sawlogs	726	\$13,789	\$18.99
Total Hardwood	2,642	\$21,453	\$8.12
TOTAL	3,744	\$46,476	\$12.41

Tree Abundance

Eighty percent of the trees growing in the merchantable stands are hardwood species and 20% are pine. HARDWOOD PULPWOOD comprises 68% of the trees. **The average total number of trees is 101 per acre**, indicating moderate stocking. The two pine sawlog categories combined account for 9% of the total trees.

Stand Density

Stand density is an indication of crowding and is measured by basal area (defined as the sum of the cross-sectional area of all trees on one acre). The calculation of basal area is a function of the **number** and **size** of trees in the forest.

Hardwood trees comprise 75% of the average stand density, pine 25%. **The average total basal area for all trees in the merchantable stands is 64 square feet per acre**, indicating moderate stand density. HARDWOOD PULPWOOD is the most prominent category impacting stand density accounting for 45% of the total; HARDWOOD SAWLOGS comprise 30% of the stand density.

The average tree measures 10" dbh. Pine trees average 11.6" and hardwood trees average 9.6".

Timber Volume

Tree height and form are added to the function to calculate timber volume. Hardwood timber accounts for 71% of the total timber volume, pine 39%. HARDWOOD PULPWOOD continues as the most prominent product category accounting for 38% of the total timber volume. The two pine sawlog categories account for 14%.

PINE & HARDWOOD TOPWOOD area added to the analysis for the timber volume and value distributions. Topwood is derived from the sawlog trees (and chip-n-saw) and is the portion of the tree that is utilized for pulpwood after sawtimber is merchandized. Pine sawlog trees typically generate more topwood than hardwood sawlog trees.

The average total timber volume is 60 tons per acre, slightly over 2 truck loads per acre.

Timber Value

Timber value is assigned to the timber volume in a stair-stepped manner. That is, value increases at an uneven rate with jumps that are triggered by product thresholds rather than by gradual gradations. Some smoothing of the value to volume and tree size ratio is realized in "log sorts" offered (or required) by certain mills but "blended" pricing is more applicable for inventory and appraisal studies.

Pine trees account for 54% of the timber value, hardwoods 46%. The PINE SAWLOGS comprise 33% of the total timber value with only 5% of the trees.

The average total timber value for all trees in the merchantable stands is \$749.60 per acre.

Sartain-Williams Timberlands (sold to Robert Williams)**Tract 85565 – West**

The acreage located west of Caney Creek was sold prior to completion of this report. However, timber inventory data were collected in this area (the cruiser was unaware of the sale). A number of the sample points were located in areas where timber had been harvested. So, to calculate the volume and value of the timber standing and growing on the entire 82 acres, these data are excluded.

The timber inventory data were collected from 8 sample points (an additional 9 sample points were taken in areas where timber had been harvested and were excluded from this analysis) .
