

TYPICAL LOT ARRANGEMENT

NOTE:

- (1) According to the Certificate of Subdivision plat approval the subsurface drainfield shall have a minimum absorption area of 165 ft. per bedroom.
- (2) The drainfield shown in this typical lot layout is in front of the house (between the house and lake). This arrangement is not particularly desirable. The drainfield and septic tank should be behind the residence whenever possible. However, please remember that the well and drainfield also must be 100 ft. apart.
