

MAP LEGEND MAP INFORMATION The soil surveys that comprise your AOI were mapped at scales Area of Interest (AOI) Capability Class - III ranging from 1:20.000 to 1:24.000. Area of Interest (AOI) Capability Class - IV Please rely on the bar scale on each map sheet for map Soils Capability Class - V measurements. **Soil Rating Polygons** Capability Class - VI Capability Class - I Source of Map: Natural Resources Conservation Service Web Soil Survey URL: Capability Class - VII Capability Class - II Coordinate System: Web Mercator (EPSG:3857) Capability Class - VIII Capability Class - III Maps from the Web Soil Survey are based on the Web Mercator Not rated or not available projection, which preserves direction and shape but distorts Capability Class - IV distance and area. A projection that preserves area, such as the **Water Features** Capability Class - V Albers equal-area conic projection, should be used if more Streams and Canals accurate calculations of distance or area are required. Capability Class - VI Transportation This product is generated from the USDA-NRCS certified data as Capability Class - VII Rails --of the version date(s) listed below. Capability Class - VIII Interstate Highways Soil Survey Area: Dallas County, Alabama Not rated or not available Survey Area Data: Version 13, Sep 17, 2018 **US Routes** Soil Rating Lines Soil Survey Area: Perry County, Alabama Maior Roads Survey Area Data: Version 11, Sep 17, 2018 Capability Class - I Local Roads Your area of interest (AOI) includes more than one soil survey Capability Class - II Background area. These survey areas may have been mapped at different Capability Class - III scales, with a different land use in mind, at different times, or at Aerial Photography different levels of detail. This may result in map unit symbols, soil Capability Class - IV properties, and interpretations that do not completely agree Capability Class - V across soil survey area boundaries. Capability Class - VI Soil map units are labeled (as space allows) for map scales 1:50,000 or larger. Capability Class - VII Date(s) aerial images were photographed: Jan 20, 2011—Nov Capability Class - VIII 10. 2017 Not rated or not available The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background **Soil Rating Points** imagery displayed on these maps. As a result, some minor Capability Class - I shifting of map unit boundaries may be evident. Capability Class - II

Nonirrigated Capability Class

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
29	Houston clay, 1 to 5 percent slopes	2	25.6	2.8%
31	Kipling loam, 1 to 5 percent slopes	3	32.9	3.6%
33	Leeper silty clay loam, 0 to 1 percent slopes, frequently flooded	4	86.0	9.3%
45	Oktibbeha clay, 1 to 5 percent slopes	3	65.0	7.1%
46	Oktibbeha clay, 5 to 12 percent slopes	6	11.2	1.2%
55	Sumter silty clay, 1 to 5 percent slopes	3	92.5	10.0%
56	Sumter silty clay, 5 to 12 percent slopes	6	78.9	8.6%
65	Vaiden clay, 0 to 1 percent slopes	3	44.9	4.9%
66	Vaiden clay, 1 to 5 percent slopes	3	271.5	29.5%
W	Water		115.5	12.5%

Totals for Area of Inter	rest	921.8	100.0%	

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI		
DsD2	Demopolis-Sumter complex, 3 to 8 percent slopes, eroded	6	2.0	0.2%		
OkB	Okolona silty clay loam, 0 to 3 percent slopes	2	1.6	0.2%		
OtC	Oktibbeha clay loam, 1 to 5 percent slopes	3	49.8	5.4%		
SeA	Sucarnoochee silty clay, 0 to 2 percent slopes, frequently flooded	4	26.8	2.9%		
SmB	Sumter silty clay loam, 1 to 3 percent slopes	2	8.6	0.9%		
VaB	Vaiden clay, 1 to 3 percent slopes	3	8.9	1.0%		
Subtotals for Soil Survey Area			97.7	10.6%		
Totals for Area of Interest			921.8	100.0%		

Description

Land capability classification shows, in a general way, the suitability of soils for most kinds of field crops. Crops that require special management are excluded. The soils are grouped according to their limitations for field crops, the risk of damage if they are used for crops, and the way they respond to management. The criteria used in grouping the soils do not include major and generally expensive landforming that would change slope, depth, or other characteristics of the soils, nor do they include possible but unlikely major reclamation projects. Capability classification is not a substitute for interpretations that show suitability and limitations of groups of soils for rangeland, for woodland, or for engineering purposes.

In the capability system, soils are generally grouped at three levels-capability class, subclass, and unit. Only class and subclass are included in this data set.

Capability classes, the broadest groups, are designated by the numbers 1 through 8. The numbers indicate progressively greater limitations and narrower choices for practical use. The classes are defined as follows:

Class 1 soils have few limitations that restrict their use.

Class 2 soils have moderate limitations that reduce the choice of plants or that require moderate conservation practices.

Class 3 soils have severe limitations that reduce the choice of plants or that require special conservation practices, or both.

Class 4 soils have very severe limitations that reduce the choice of plants or that require very careful management, or both.

Class 5 soils are subject to little or no erosion but have other limitations, impractical to remove, that restrict their use mainly to pasture, rangeland, forestland, or wildlife habitat.

Class 6 soils have severe limitations that make them generally unsuitable for cultivation and that restrict their use mainly to pasture, rangeland, forestland, or wildlife habitat.

Class 7 soils have very severe limitations that make them unsuitable for cultivation and that restrict their use mainly to grazing, forestland, or wildlife habitat.

Class 8 soils and miscellaneous areas have limitations that preclude commercial plant production and that restrict their use to recreational purposes, wildlife habitat, watershed, or esthetic purposes.
