Farmland Classification—Baker and Mitchell Counties, Georgia (Dunaway Tract 113.3 Acres (Crocker))

- Farmland of statewide importance, if drained and either protected from flooding or not frequently flooded during the growing season
 Farmland of statewide importance, if irrigated and drained
 Farmland of statewide
 - Farmland of statewide importance, if irrigated and either protected from flooding or not frequently flooded during the growing season
 - Farmland of statewide importance, if subsoiled, completely removing the root inhibiting soil layer
 - Farmland of statewide importance, if irrigated and the product of I (soil erodibility) x C (climate factor) does not exceed 60

- Farmland of statewide importance, if irrigated and reclaimed of excess salts and sodium
- Farmland of statewide importance, if drained or either protected from flooding or not frequently flooded during the growing season
- Farmland of statewide importance, if warm enough, and either drained or either protected from flooding or not frequently flooded during the growing season
- Farmland of statewide importance, if warm enough
- Farmland of statewide importance, if thawed
- Farmland of local importance
 Farmland of local

importance, if irrigated

- Farmland of unique importance
- Not rated or not available

Background

Aerial Photography

The soil surveys that comprise your AOI were mapped at 1:20.000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Baker and Mitchell Counties, Georgia Survey Area Data: Version 17, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Dec 31, 2009—Nov 19, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Farmland Classification

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI			
CaC2	Carnegie sandy loam, 5 to 8 percent slopes, moderately eroded	Farmland of statewide importance	47.2	49.4%			
Ор	Osier-Pelham complex, 0 to 2 percent slopes, occasionally flooded	Not prime farmland	22.4	23.4%			
TfB	Tifton loamy sand, 2 to 5 percent slopes	All areas are prime farmland	9.8	10.2%			
TsC2	Tifton sandy loam, 5 to 8 percent slopes, eroded	All areas are prime farmland	9.7	10.2%			
TwB	Troup sand, 0 to 5 percent slopes	Not prime farmland	5.1	5.4%			
W	Water	Not prime farmland	1.4	1.5%			
Totals for Area of Inter	rest	95.7	100.0%				

Description

Farmland classification identifies map units as prime farmland, farmland of statewide importance, farmland of local importance, or unique farmland. It identifies the location and extent of the soils that are best suited to food, feed, fiber, forage, and oilseed crops. NRCS policy and procedures on prime and unique farmlands are published in the "Federal Register," Vol. 43, No. 21, January 31, 1978.
