to introduce our "new look" plat book. In our never ending effort to produce the best publishers has invested countless hours of research and development in the areas of GIS and in the book you are now reading. By using computerized digitizing, digital imagery and our own we are able to combine data from several sources, including County or Township Assessor's or Highways, B911 systems and our own census tracts. The data is maintained on a computer. Since the data is computerized by category or level, we can update and/or manipulate it easily, then combine it with other levels, such as hydrology or land ownership. When we combine it with township plat maps you see in this book. If we combine other levels, we produce the maps in this book has been calibrated to fit the USGS quadrangle system so it is consistent with that data, we are able to rescale maps to virtually any size, including 24 or 30 inch wall maps. We think you'll very easily to better show or enhance particular information. We hope you take a few your plat book, we feel that you will find every page easy to read and professionally printed.
