

FODDER – FRESH GRASS

Fodder is fresh green grass sprouts, germinated for 7 days and the most FRESH and NATURAL supplemental feed for all grass eating animals – horses, sheep, goats and chickens. 3T Ranch produces thousands of pounds of Fodder – Fresh Grass year round at our ranch in Franktown, so the quality of your feed can be at the same high level regardless of the season. Fodder – Fresh Grass is a 100% natural supplement.

HEALTH & HAPPINESS

Fodder – Fresh Grass are sprouts that are hydroponically grown from wheat seed into feed in 7 days in a temperature controlled building. It is a super food for horses and since they are grown hydroponically it means, no chemicals, no soil, no pesticides. The grass blades along with the root mat are harvested and fed to animals as part of a feed ration. Packed with nutrients and highly digestible; animals thrive when fed fodder sprouts. It improves coat, body condition, performance and reduces colic in horses.

SAVING ENERGY & EXPENSE

Fodder – Fresh Grass can allow you to reduce the quality and cost of the hay you buy while increasing the overall nutrition and performance of your feed. Fodder is a high-quality forage; on a dry matter basis, it is nearly as high as grain in calories yet higher in fiber. The average ration per horse is 10 lbs per day of fodder along with hay. The high water content encourages digestion and reduces the risk of colic and digestive upset. Because of fodder's high water content, horses get more liquids into them. Therefore, the horses recover more quickly from races or work and are ready to run again sooner.

A BETTER BALANCE

Fodder – Fresh Grass's vitamins content is also much better than in hay. Colorado State University tested our product to ensure the best results for your horse. Evidence suggests that fodder fosters a balance of microbes in the digestive tract and may increase digestibility of other nutritional components of the diet.

BENEFITS OF FEEDING FODDER – FRESH GRASS:

- Faster recovery after exertion
- Better performance in race or working horses
- Improved coat and general appearance
- Better hydration
- Less incidence of colic and gut ulcers
- Gentler, calmer animals
- Lower feed bills
- Lower vet costs
