\*DBH is Diameter Breast Height, 4.5 feet off the ground on the uphill side of the tree.

**SUMMARY and CONCLUSION:**

None of the values expressed in this report reflect any bare land value or mineral values for this property. The appraised values outlined in this report reflect only the pulpwood and sawtimber value. Normally a timber sale is economically viable if the sawtimber 3,600 board feet or more of merchantable size sawtimber per acre. The subject property contains an estimated 3,280 board feet of merchantable size sawtimber per acre. The estimated value of the timber shown in the Appraisal reflects the estimated Fair Market Value range if all Pulpwood and sawtimber size trees on this property were cut.

Since one third of this property is owned by another landowner, then the Appraised value should be adjusted accordingly. Further adjustments need to be taken into consideration for the access road, which is nearly a mile long and in need of upgrades.

	*Estimated Volume	Estimated Value
Pulpwood	1,333 trees.	\$ 5,000 to \$ 6,000
Premerchandise sawtimber	231,183 bd ft.	\$35,000 to \$32,000
Mercantile sawtimber	593,716 bd ft.	\$120,000 to \$125,000

**Estimated Timber Fair Market Value**

\$160,000 to \$175,000

**\*Dorie Tree Scale**

REPORT PREPARED ON MAY 8, 2013

LANNER FORESTIE

WV REGISTERED FORESTRY TECHNICIAN #84

DYER TRACT, WEBSTER COUNTY, WEST VIRGINIA  
VOLUME/VALUE PROJECTIONS

Assuming an estimated 4 inch DBH growth in Yellow-Poplar and a 3 inch DBH growth of other species in 15 years, the projected timber volume in the year 2020 of trees 16 inches in DBH and larger is 929,350 bd.ft., Doyle Tree Scale.

The estimated stumpage value of this projected volume in year 2020 is:

929,350 bd. ft. at \$200/mbf = \$185,870.00  
929,350 bd.ft. at \$250/mbf = \$232,375.00

The above projection shows a 10% reduction in the total estimated volume for logging road construction and natural mortality.

This value estimate is for 100% interest in this timber. No deduction or discounts were applied for the Dyer Heirs only having title to 2/3 interest in this timber.

Estimates of the acreage, timber volumes or values contained in this report are the result of statistical sample in accordance with industry standards. Due to the variances and accuracy levels inherit in sampling techniques, any species, volumes, values, or acreage stated in this report are intended to be only estimates, based on the forester sampling, and are expressly declared by the forester not to be precise statements of expected outcomes. Any volumes or values stated in this report may or may not be the timber volume or value actually obtained.
