Northern California Pecan Inc.

Producing Pecan Orchards, Huller/Dryer/Processing/Marketing Facility Corning, California

Property: 208 +/- acres planted to 160 acres of producing pecans. Offering includes huller/dryer/processing/marketing facility. Irrigation water provided primarily by productive groundwater wells. Warehouses with interior office, homes and useful outbuildings. Located (S) of Corning with good access to I-5 and Hwy 99.

Locations: There are two locations only 6 miles apart. Location #1, 148 +/- acres planted to 104 acres of producing pecans includes the huller / dryer / processing / marketing facility is located at 24249 Million Road, Corning, CA 96021. Location #2, 60 +/- acres planted to 56 acres of producing pecans is on the northside of Chittenden Road, Corning, CA 96021.

Huller Line: The line is designed to hull pecans and walnuts. In 2021, NCPI hulled and dried about 1,300 tons (pecans @ 700 tons, walnuts @ 600 tons). The huller structure consists of metal beams & roof with concrete slab foundation. Equipment is primarily J.E.M brand, Forsburg destoner & Weco color sorting equipment. Depending upon conditions, throughput is 12 tons per hour for pecans and 15 tons per hour for walnuts. See attached huller line equipment schedule.

Dryer Line: Three banks of metal stadium dryer bins constructed by Giesbrecht Mfg., McDowell Mfg. and NCPI. To increase drying space, there is room within the dryer building to add a 4TH bank of dryer bins. The line has 4', 5' and 10' wide bins for management of crop lot sizes. Single load capacity is 150 tons for pecans and 120 tons for walnuts. The enclosed dryer building consists of metal beams, roof and siding with concrete slab foundation. Dryer heat is provided by propane, owned tanks and solar roof wall for energy savings. See attached dryer line equipment schedule.

Processing Line: After drying, pecans pass through pin & color sorters and sizer prior to being stored in 4' x 4' wood bins. These bins are stored within the 10,000 sqft

The information contained herein is from sources deemed reliable, however, accuracy is not guaranteed. warehouse wherein is located the 800 sqft office. As determined by the market, the nuts are bagged in 2,000 lb super sack bags for domestic market or 50 lb sacks for export market.

Marketing: In 2021, Northern California Pecan, Inc. (NCPI) marketed nearly 50% of the California pecan crop. NCPI has valued relationships with growers and brokers. Prospective buyer is expected to honor & benefit from these relationships.

Orchards: 160 +/- acres planted to producing pecans irrigated by groundwater wells and micro-sprinklers. Wichita is the primary variety. At Million Road, 104 acres are planted and in full production. The tree spacing is 22' x 26', Cheyenne is the primary pollinator. 2022 production was 3,301 inshell pounds per acre, the 3 year average is 2,795 inshell pounds per acre. At Chittenden Road, 56 acres were planted in 2013 & 2015 and just beginning production. The tree spacing is 18' x 36', Western Schley and Pawnee are the pollinators. 2022 production for this young orchard just coming into production was 1,845 inshell pounds per acre.

Water: Million Road has multiple irrigation wells and each home has a domestic well with submersible pump. The primary well in the center of the orchards was drilled in 2015 to a depth of 500'. This 16" cased well with 200 Hp motor and VFD panel is capable of irrigating the entire orchard in 2 sets. Chittenden Road has (2) irrigation wells and is also within the Corning Water District. The new 16" cased well was drilled in 2021 to a depth of 600'. It is setup with bowls, gearhead & diesel engine.

Soils: Nearly 75% of Million Road soils are rated Class 2, the balance is rated Class 3 & 4, topography is undulating. Nearly 100% of Chittenden Road soils are rated Class 2, topography is level to grade. See attached NRCS soils maps.

Owner Home: This nicely landscaped two-story home built in 1978 is wood framed on concrete foundation with composition roof. It has 2,238 sqft of living space, 3 bedrooms, 2 baths, living room with vaulted ceiling & wood stove insert, central HVAC. The kitchen was recently remodeled including granite counter tops / back splash, hickory cabinets, tile flooring and appliances.

Solar Systems: Million Road has (2) owned solar systems installed about 4 years ago. The 58 Kw system installed on the equipment shed roof offsets a portion of the primary irrigation well electricity. The 4.14 Kw is installed on the roof of the Owners home and offsets a portion of the home electricity.

530.529.4400 office / 530.527.5042 fax

Zoning: Million Road parcels total 148.46 acres; 091-290-014 (38.53 acres), 091-290-015 (28.49 acres), 091-290-016 (18.94 acres), 091-290-055 (23.10 acres), 091-290-056 (20.00 acres) & 091-050-051(19.40 acres). Chittenden Road parcels total 60.00 acres; 069-240-021 (10.00 acres), 069-240-022 (10.00 acres), 069-240-023 (20.00 acres), 069-240-025 (10.00 acres) & 069-240-026 (10.00 acres). Million Road parcels 091-290-014 & 015 are zoned AG-AP, agricultural, ag preserve, 40 acre minimum. All other parcels are zoned AG-2, agricultural, 20 acre minimum.

Mineral Rights: A portion of minerals rights are previously reserved, those owned by Seller are included in the sale. Preliminary title reports are available.

Depreciation: Improvements such as the huller/dryer/processing facility, trees, wells, irrigation systems and buildings offer prospective Buyer depreciation advantages.

Comments: Opportunity to purchase Northern California Pecan Inc. an established pecan huller / dryer / processor & marketer with valuable grower & broker relationships. Plus 208 +/- acres with 160 acres planted to pecans. Everything is ready for your success, high producing pecan trees, huller / dryer / processing facility plus facility equipment / supplies. Management is willing to help to facilitate a smooth transition into the 2023 season and experienced employees are eager to stay on board.

Showing: Do not disturb occupants. Listing Broker to accompany showings.

Listing Price: \$5,800,000 cash to Seller

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Tehama County, California
Survey Area Data: Version 15, Sep 6, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 8, 2019—May 10, 2019

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Irrigated Capability Class

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
AvA	Arbuckle gravelly loam, 0 to 2 percent slopes, MLRA 17	2	26.6	18.1%
Ay	Arbuckle gravelly loam, clayey substratum, channeled	3	11.9	8.1%
Czs	Cortina very gravelly fine sandy loam	4	9.4	6.4%
KpA	Kimball loam, 0 to 3 percent slopes	3	29.8	20.3%
PrB	Peters clay, 1 to 8 percent slopes		3.7	2.5%

Totals for Area of Interest			146.9	100.0%

Description

Land capability classification shows, in a general way, the suitability of soils for most kinds of field crops. Crops that require special management are excluded. The soils are grouped according to their limitations for field crops, the risk of damage if they are used for crops, and the way they respond to management. The criteria used in grouping the soils do not include major and generally expensive landforming that would change slope, depth, or other characteristics of the soils, nor do they include possible but unlikely major reclamation projects. Capability classification is not a substitute for interpretations that show suitability and limitations of groups of soils for rangeland, for woodland, or for engineering purposes.

In the capability system, soils are generally grouped at three levels—capability class, subclass, and unit. Only class and subclass are included in this data set.

Capability classes, the broadest groups, are designated by the numbers 1 through 8. The numbers indicate progressively greater limitations and narrower choices for practical use. The classes are defined as follows:

Class 1 soils have few limitations that restrict their use.

Class 2 soils have moderate limitations that reduce the choice of plants or that require moderate conservation practices.

Class 3 soils have severe limitations that reduce the choice of plants or that require special conservation practices, or both.

Class 4 soils have very severe limitations that reduce the choice of plants or that require very careful management, or both.

Class 5 soils are subject to little or no erosion but have other limitations, impractical to remove, that restrict their use mainly to pasture, rangeland, forestland, or wildlife habitat.

Class 6 soils have severe limitations that make them generally unsuitable for cultivation and that restrict their use mainly to pasture, rangeland, forestland, or wildlife habitat.

Class 7 soils have very severe limitations that make them unsuitable for cultivation and that restrict their use mainly to grazing, forestland, or wildlife habitat.

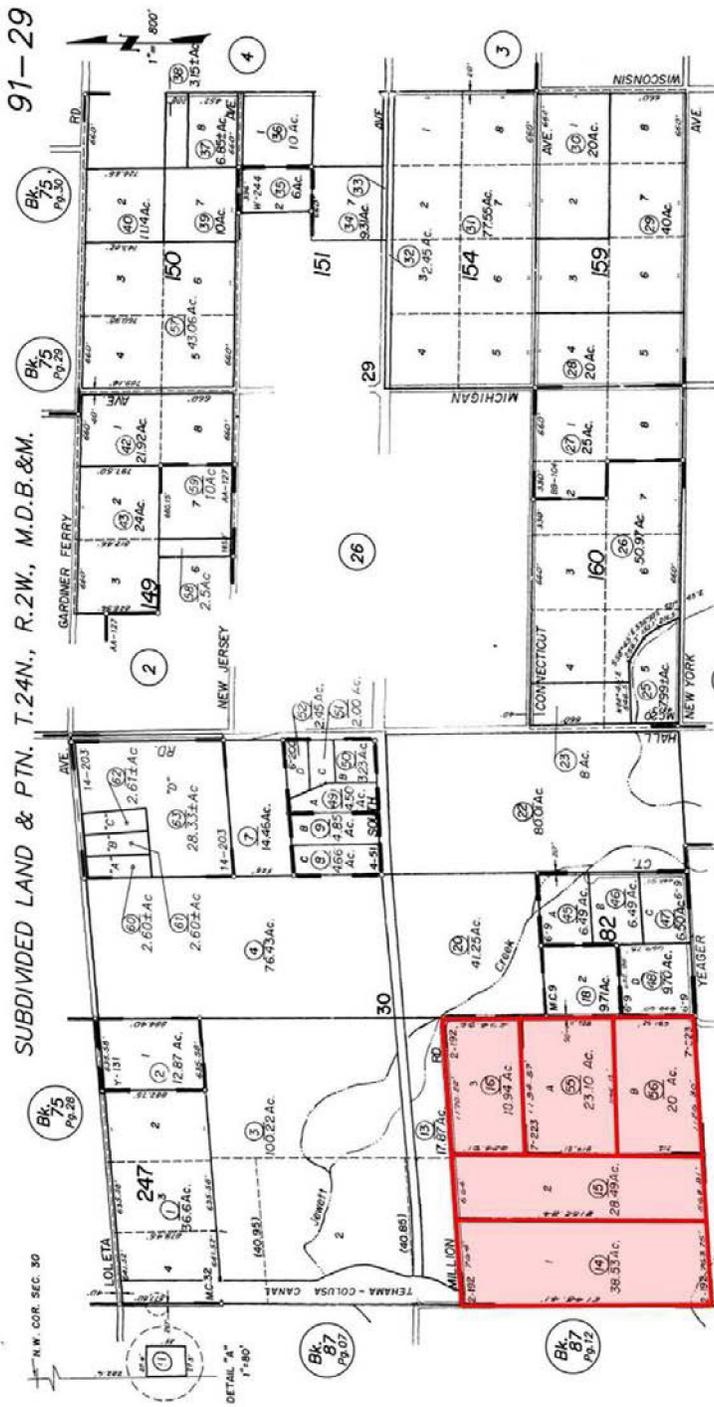

Class 8 soils and miscellaneous areas have limitations that preclude commercial plant production and that restrict their use to recreational purposes, wildlife habitat, watershed, or esthetic purposes.
