

water leak around large window, needs flashing to relocate water ~~that~~ went behind siding. Waiting for contractor to respond. Will replace damaged plywood and install flashing.

Original permit was for top level only but I enclosed the middle level using original permit. 19 years later I had to apply for permit to enclose the middle level, which is current and good to 2029. The walls had to be removed to paint the 2x4s with a ~~oil~~ paint. Vents had to be added and hot water tank moved upstairs. The middle may be insulated with board or foam and the interior walls restored. The level is incidental storage not living area as per codes.
